LAB EXERCISE 3 (SECJ1013)

PROGRAMMING TECHNIQUE 1

SECTION 10 SEM 1, 2025/2026

INSTRUCTIONS TO THE STUDENTS

- *This exercise must be done **individually**.*
- *Please refer to the list of question sets to find out your set of questions.*
- *Your program must follow the input and output as required in the text and shown in the examples. You must test the programs with (but not limited to) all the input given in the examples.*
- *Any form of plagiarisms is **NOT ALLOWED**. Students who copied other students' programs will get **ZERO** marks (both parties, students who copied, and students that share their work).*
- *Please insert your **name, matrics number, and date** as a comment in your solution.*

SUBMISSION PROCEDURE

- *Please submit this exercise no later than **December 30 2025, Tuesday(9.30/ 12.30MYT)**.*
- *Only one file is required for the submission which is the source code (the file with the extension .cpp).*

- *Submit the assignment via the UTM's e-learning system.*

Write a complete C++ program that produce an "E" pattern as stated in Figure 1. Your program should use 1-dimension array together with for/nested for/while/do...while loops and if/else...if/ switch case control structures if needed. Your program should be simplified as much as possible to avoid unnecessary/repetitive codes.

Figure 1: Output

```
XXXXXX
XX
XXXXXX
XX
XXXXXX
```
